# Todo List
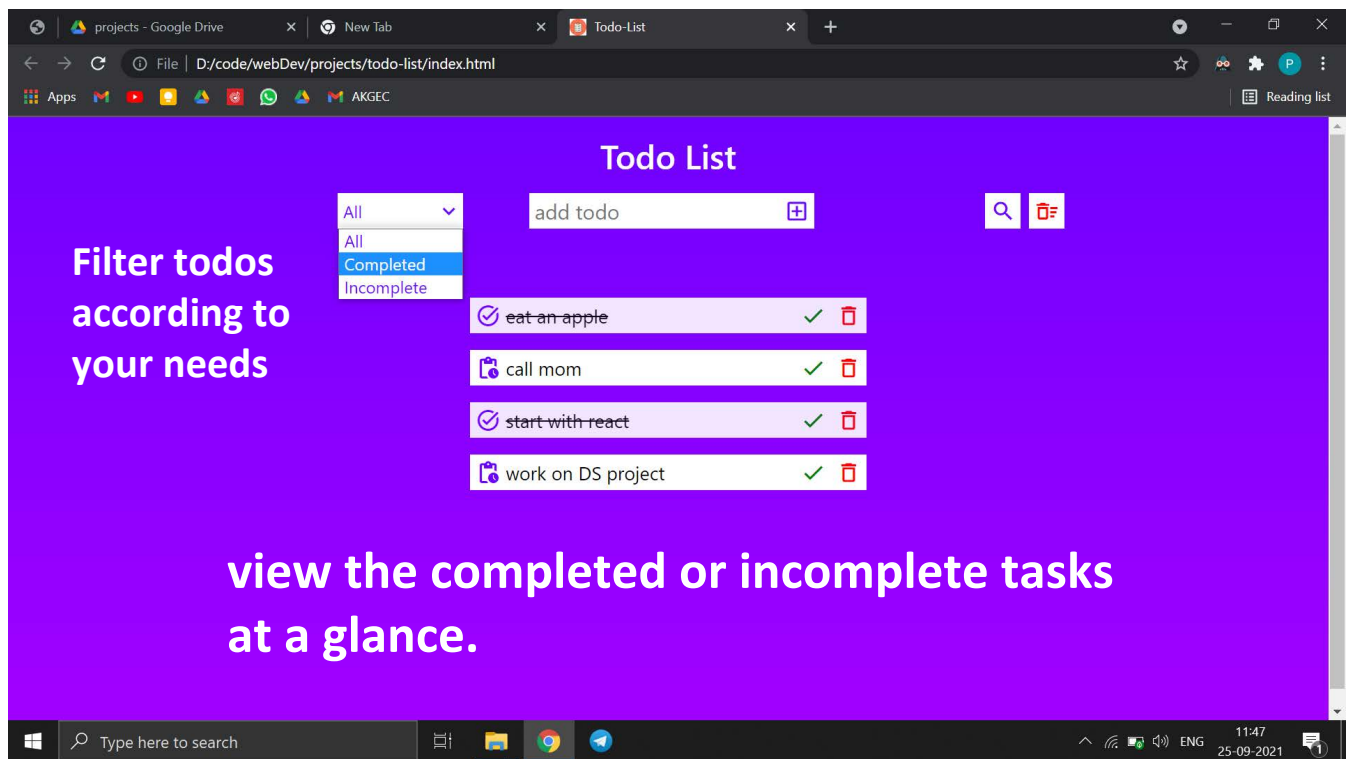

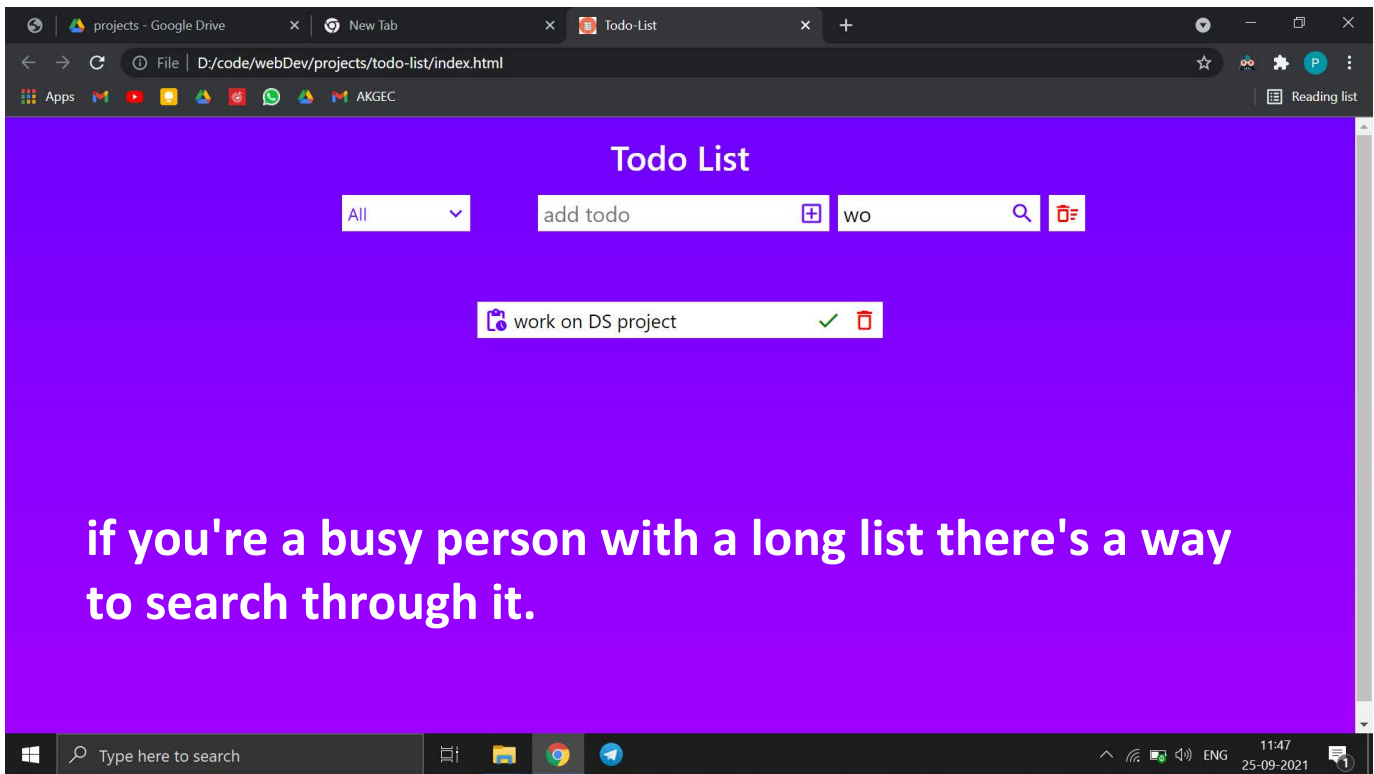

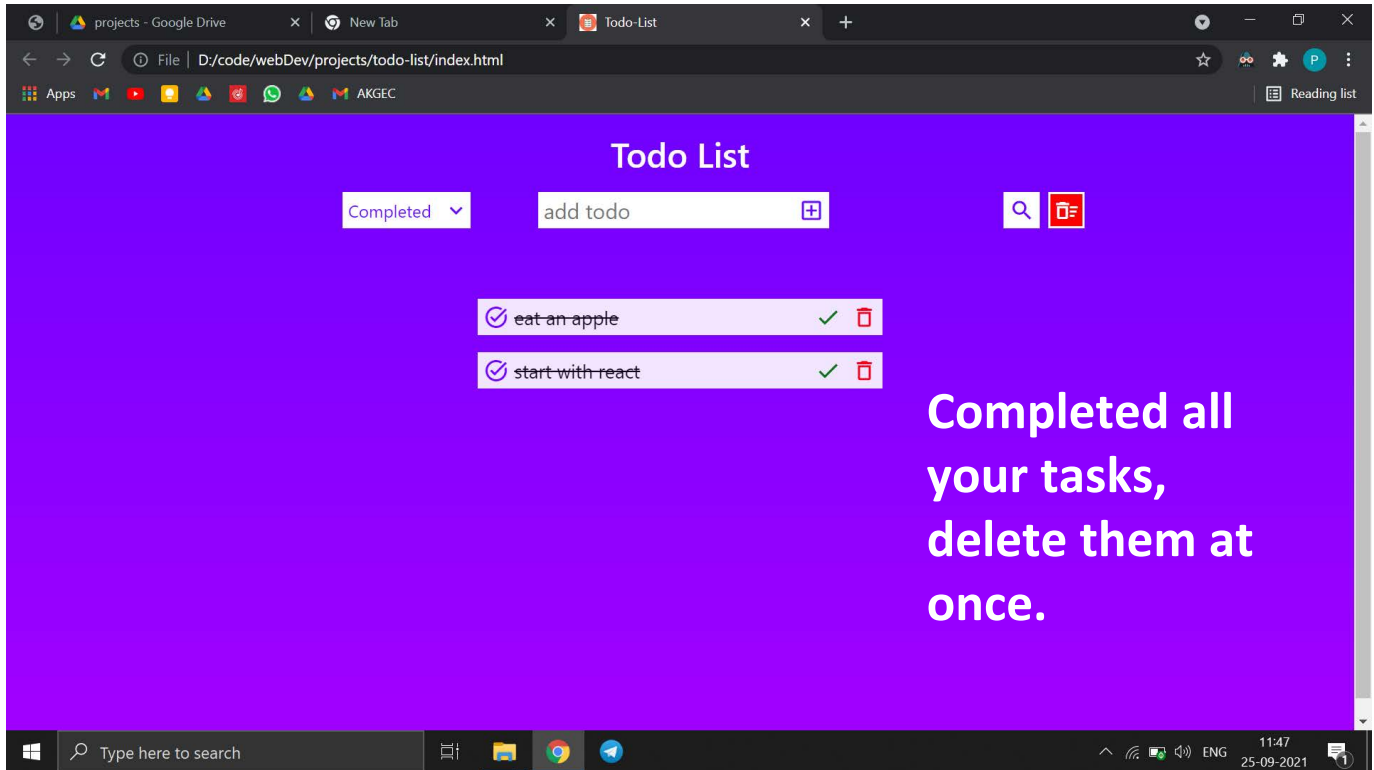

This project is made using only HTML, CSS, and Vanilla JS.
You can plan your day by making a todo-list and be productive throughout.

Todos can be added easily, UI is simple and easy to use.

Completed todos can be marked or deleted

if you're a busy person with a long list there's a way to search through it.

Filter todos according to your needs

view the completed or incomplete tasks at a glance.

Completed all your tasks, delete them at once.
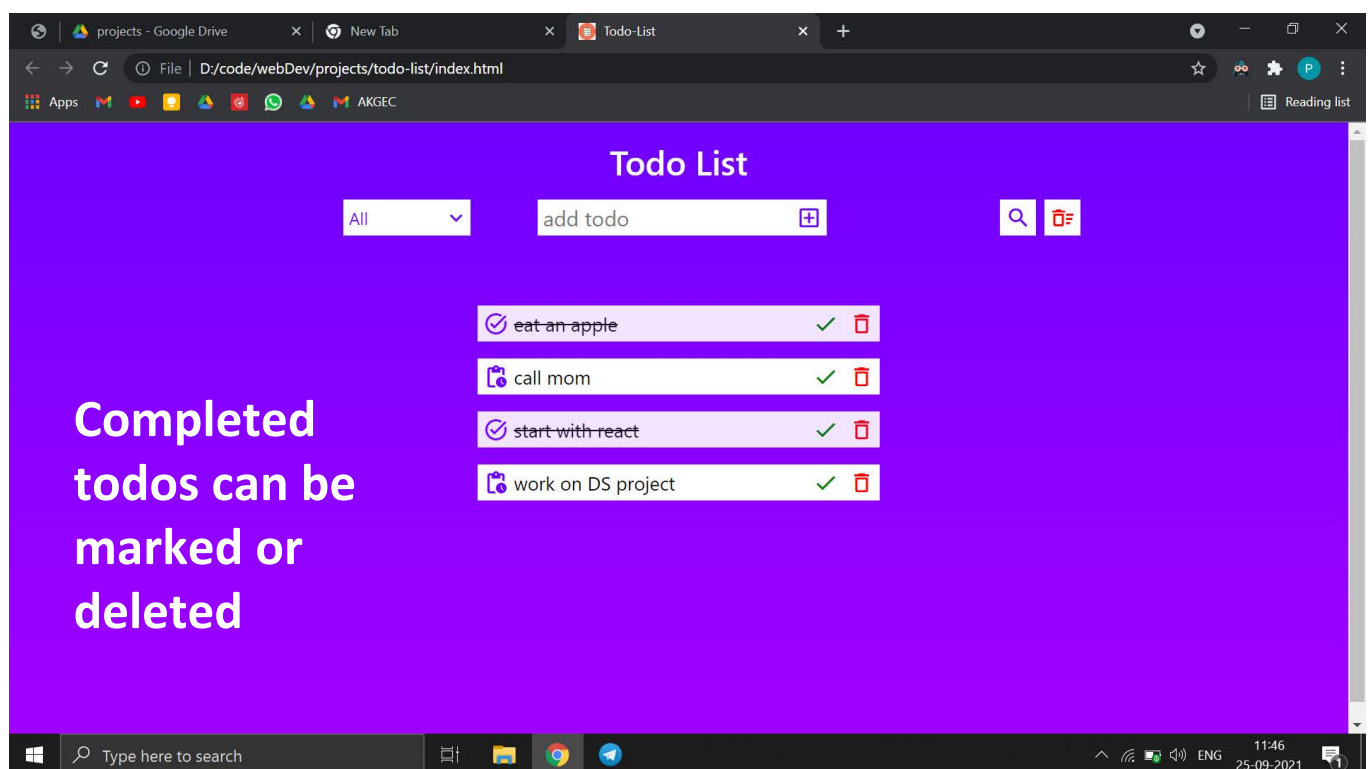

Don't worry about losing any data, all the todos are backed up to the local storage.
